LANGUAGES

French, Romanian
Native

English
B2

Dutch
Basic

TECH STACK

Programming languages
Python, JavaScript, TypeScript, HTML, CSS/SCSS

Back-end
Django, Django REST, Django Ninja, Flask, Celery, Firebase Cloud Functions, Digital Ocean Functions, pytest

Front-end
Vue 2/3, Nuxt, Quasar, Vuetify, Shadcn, Bootstrap, Tanstack, DataTables, HTMX, jQuery

Mobile
Capacitor, Cordova (Android & iOS)

Databases
PostgreSQL, Elasticsearch, Firebase Realtime Database, Firestore

DevOps
Linux, Shell/Bash, Docker, GitLab CI/CD, GitHub Workflows, Firebase CLI, Digital Ocean Registry

Tooling
Poetry, uv, npm, pnpm, Ruff, Pre-commit, Sentry, Figma

Payment systems
Chargebee, Stripe

Architecture
Design systems, API design and typed clients, auth (JWT, Keycloak, SAML, Azure AD), i18n

AI
Coding agents on production work, harnesses, agent workflow design

Refreshing
Java, C#, Angular, React

EXPERIENCE

2026 | 2021

Arcanite Solutions SA

Developer, frontend referent — Puidoux (VD) — arcanite.ch

Swiss software engineering firm, ~45 people, founded 2016 by EPFL alumni, self-financed. On site until 2024, then 80% remote. Nine products in five years, in teams of two to six, ranging from SPAs to a decade-old Django monolith. I worked mainly on the frontend but regularly on the backend too, and I stayed with most of these products long enough to maintain them in production for years. As frontend referent I reviewed the team's work, actively participated in design and architectural discussions, answered questions across projects and worked on the company frontend guidelines.

AbaHost — private-cloud hosting for Abacus ERP — 2022–2026

Arcanite's main product: 600+ hosted servers for 500+ Swiss companies, under a 99.7% contractual SLA. Main frontend contributor for the last 4 years, and regularly on the Django side behind it.

- Daily maintenance of the project: bug fixes and Sentry reports, performance/scalability work, documentation, guidelines, coordination with the Hosting team.
- Implemented the v2 design: removed the vendored legacy theme, designed and implemented the templating logic, UI elements and systems, reworked the views across 20 of 21 Django apps.
- Designed and built the Abacus Server settings app: a modern Vue 3/TypeScript app living in the monolith, with a typed OpenAPI-documented Django Ninja API.

Compliance platform for Wecan — Geneva fintech — 2023–2025

A shared KYC/KYB network for Swiss private banks and independent asset managers, used by many financial institutions including Pictet, Lombard Odier and UBP.

- Took part in the design and architectural decisions.
- Chose the stack (Vue 3, Quasar, Vite, Pinia, TanStack Query) and initiated the frontend development: routing, stores and layouting logic, then implemented most of the app frontend, under demanding design constraints and with the complexity the compliance workflows imposed on the interface.

Design system and shared libraries — 2022–2026

- Supervised and led the integration of the internal design system (Bootstrap 5 re-skinned to IBM Carbon) and maintained its release pipeline for three and a half years (~49 versions to a private registry, with documentation published automatically per branch).
- Wrote and maintained a DataTables wrapper library used across ~100 call sites, and later evaluated and costed a proposal to retire it.

Other projects at Arcanite

- Main frontend developer on a medical-coding search platform for SwissCoding, a search and annotation tool over the official Swiss ICD-10-GM and CHOP classifications that hospital reimbursement depends on.
- Led and implemented the frontend for a maritime fleet-emissions dashboard for Daphne Technology: vessels by IMO number, per-gas time series from InfluxDB, Mapbox fleet map.
- Developed and maintained multiple internal services.

Python, Django, Vue 2/3, TypeScript, jQuery, GitLab CI, Docker

2021 | 2018

Independent developer

Freelance

Padel Pro — web, Android & iOS

- App to manage padel tournaments, shipped to Android and iOS from one codebase

Generic Website — landing-page generator — generic-website.com

- Landing pages generator with an extremely easy way to manage the content
- Subscription billing for the service
- Several production instances: fromageriesa.ch, jura-coiffure.ch

Swiss Association of Occupational Therapists — snase.ch

- Website with a custom CMS, with a complete but extremely simple administration

Nuxt.js, Node, Django, Capacitor, Cordova, Firebase, Stripe, Chargebee, Digital Ocean

EARLIER ENGINEERING PROJECTS

2020 | 2019

Engineering projects

HE-Arc — sole author

Built during my engineering degree, each with its own technical report.

- **YARTS (2019)** — RTS game engine in Java and LibGDX, with an entity-component architecture chosen by benchmarking three candidate designs.
- **YAARTS (2020)** — Unity and C#: a deliberate rebuild of the same game in a different engine to correct the architecture I had got wrong the first time.
- **Linor (2020)** — real-time lane detection in Python and OpenCV.

Java, LibGDX, Unity, C#, Python, OpenCV

EDUCATION

2020 | 2016

BSc Computer Science & Engineering

HE-Arc Ingénierie — Neuchâtel

Swiss HES engineering degree, software development and multimedia

2013 | 2010

CESS (general secondary)

IFC Jonfosse — Liège (BE)

BEFORE SOFTWARE

2016 | 2005

Professional DJ

Independent

- Residencies in Belgium, Australia and Thailand
- Mixing instructor at the first official DJ school in Belgium.
